Electronic Safe Locks A-Series 6128/6129

The Sargent & Greenleaf Models 6128 and 6129

This lock will replace the key and mechanical combination lock for ATM safe and normal safe. It is simple to install and there is no drilling or wiring involved. It has 2 or 3 level of security controls and the advantage is the audit trail or reports generated for all the past transactions. This will prevent loss of money or important items such as jewelry or documents through unauthorized opening of the safe. Useful for chain stores, banks, offices where mechanical lock safes are currently used.

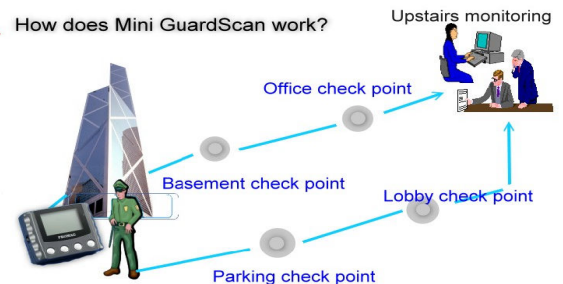

GuardScan Patrol Terminal GS1100

GUARDSCAN is a Patrol Tour Data Collection Terminal based on RFID technology. It scans RFID tags and store their ID-codes in a journal memory, together with the Date/Time stamp. It helps you watch over your employees that you have had difficulties to track, those whose working duties require moving from place to place, such as security personnel patrolling, policeman patrolling, remote equipment inspection/maintenance, etc.

This is normally given to the security guards and is useful to check the patrolling and clock-in of the designated patrolling points. The information can be downloaded to the PC and data send via email.

How does Mini GuardScan work?

CMS

CMS stand for **Central Monitoring Service**. It is actually a call centre and operates 24x7x365 depending on the types of services provided. In the case for alarm user they can opt for:

1. Alarm on stand alone mode – no link up to CMS station. Alarm will activate if the alarm zone is breached but the customer will not be aware if there is no one present at the protected premise. The siren and strobe light may/may not frighten the intruder/s and neighbors or passer-bys are usually not bothered. This is due to the false alarm syndrome and apathy of the present society.
2. Alarm with link up to CMS via phone line (fixed, mobile or other medium)
 - Alarm installer and CMS are of the same provider
 - Alarm installer and CMS are from different party (very common in the market but quality may be compromised)
 - Some alarm panels can be linked to the mobile phone, PDA and computer laptop etc. Remote CCTV viewing can also be an option for alarm verification. This inconvenient the users and they may be frustrated because in reality you still need someone to be at the scene fast enough to stop the crime. The police may not be able to respond even if they are notified
3. Some CMS providers are not licensed by KDN (Internal Security Ministry) and is deem to be illegal operators
4. Certain CMS operators also provide alarm response services. However response time and response procedure varies from company to company. The response time and procedures will determine the ability to prevent/minimize loss from taking place
5. SECOM provides end to end solution for alarm users – we carry out R&D for alarm products development, we manufacture the alarm products (own use and not for re-sale in the market), we provide security planning, alarm installation, maintenance, we operate our own 24x7x365 dedicated CMS station with our proprietary software and we provide 24 hours prompt response with very stringent response procedures including holding full customers keys. SECOM alarm service is ranked the most comprehensive in the market and it is considered a close substitution to security guard services (more pricey) and has proven to be very effective in crime prevention.
